WARG ROBOTICS

Real world, unreal experiences.

A digital video link that records while it streams, sets up from your phone, and arrives ready to fly.

GHOST AND GREYWIND · AVAILABLE NOW AT WARGROBOTICS.COM

GLASS TO GLASS	RANGE	LIVE VIDEO	OUTPUT
60 ms	5 km	720p60	HDMI

Five reasons to change your video link

Premium video transmission

Digital from the sensor to the screen, with no analogue stage anywhere in the path: 720p at 60 fps in H.264 from an 8 MP Sony sensor. No static, no rolling interference, no slow fade at the edge of range.

`60 ms glass to glass · up to 5 km`

Ready to go

Pair it once, power it, fly. Everything else is set from your phone's browser on the ground unit's own Wi-Fi. No app to install, no soldering, nothing to subscribe to.

`Setup in the browser · updates over the air`

Any screen with HDMI

The ground unit drives whatever screen is already in front of you. A TV, a monitor, or HDMI goggles you already own, with link quality and flight data drawn over the picture.

`HDMI out · on-screen display · no goggle to buy`

Record while you fly

The air unit records the flight in the same quality as the live stream, so what you saw is what you keep. Download the files to your phone or computer over Wi-Fi.

`Onboard storage · MP4 · download over Wi-Fi`

Holds on when the signal doesn’t

As the signal weakens, the picture steps down in quality instead of cutting out. After interference the link finds its way back by itself, without a power cycle.

`1.5–19 Mbit/s, adjusted automatically`

THE LIVE PICTURE, AS THE PILOT SEES IT

Fits what you already fly

Small enough for a 2 inch freestyle build, unchanged on anything larger. The camera sits on a ribbon, so the lens goes where the body cannot.

QUADS, FIXED WING AND GROUND VEHICLES TAKE THE SAME UNIT

Every kind of vehicle

Quads, fixed wing and VTOL in the air; rovers and fixed rigs on the ground. Upgrade what you already own, or design it into a new build.

Talks to your flight controller

Two-way MAVLink telemetry over the same link as the video, for ArduPilot, PX4 and INAV. Flight data shows up on your screen.

ON A QUAD

ON A TRACKED ROVER

Any screen, with your flight on it

Most systems tie you to one goggle, and the goggle often costs more than the link. Here the ground unit plugs straight into an HDMI screen, with no converter in between.

TV, MONITOR OR HDMI GOGGLES, FROM ONE GROUND UNIT

ON THE SCREEN, OVER THE VIDEO

Link quality	Signal and bitrate, live
Flight data	From your flight controller
Recording	State, started and stopped from the ground
Software	Versions on both units

PICTURE CONTROLS

Rotation, noise reduction, sharpness, contrast, saturation, brightness, exposure (±4 EV) and white balance, all from the setup page.

Record while you fly

The air unit writes the flight to its own storage as it streams, so you never choose between seeing the flight and keeping it.

Quality	Same as the live stream
Format	MP4 (H.264)
Files	A new file every 10 minutes
When storage fills	Stops cleanly before it is full
Getting the files	Over Wi-Fi, to phone or computer

Set up from your phone

No app to install. The ground unit makes its own Wi-Fi, and the setup page opens in any browser.

01

Mount

Fit the air unit and camera, and connect your flight controller.

02

Pair

Pair the air and ground unit once. Each pair gets its own key.

03

Connect

Plug in an HDMI screen and join the ground unit's Wi-Fi.

04

Fly

Pick channel, power and video mode on the page, and go.

Meet our three Wargs

Ghost JON

AVAILABLE NOW

₹29,999 +GST
₹35,399 incl. GST

Live and recording	720p · 60 fps
Sensor	8 MP Sony IMX219
Storage	8 GB ~50 MIN AT FULL BITRATE

Greywind ROBB

AVAILABLE NOW

₹35,999 +GST
₹42,479 incl. GST

Live and recording	1080p · 30 fps 720P AT 60 FPS
Sensor	8 MP Sony IMX219
Storage	16 GB ~1 H 45 AT FULL BITRATE

Raven BRAN

LAUNCHING SOON

Price to confirm

Recording	4K · 30 fps PROVISIONAL
Storage	32 GB PROVISIONAL

Ghost + Greywind together: ₹49,999 +GST (₹58,999 incl. GST), for every pair in the order.

Prices in Indian rupees; GST at 18% is added at checkout. Delivery within India is included. Raven is priced on release.

Detailed specs

VIDEO

Live video	1280 × 720 at 60 fps, H.264
Other modes	Up to 1920 × 1080, selectable
Bitrate	1.5–19 Mbit/s, adaptive
Sensor	8 MP Sony IMX219
Field of view	140 deg diagonal

LINK

Latency, glass to glass	60 ms
Operating range	Up to 5 km
Band	5.8 GHz (5725–5875 MHz), 7 channels
Antennas	2 per unit, MIMO with diversity
Security	Paired units, 256-bit encryption

RECORDING

Records while streaming	Yes, at live quality
Format · transfer	MP4 · over Wi-Fi

FITTING AND OUTPUT

Display out	HDMI, with on-screen display
Telemetry	MAVLink: ArduPilot, PX4, INAV
Air unit	6 × 5 × 3 cm · 50 g with camera
Power	5 V, both units
Setup · updates	Phone browser · over the air
Subscription	None

After you buy

GHOST, READY TO MOUNT

12 months of warranty

From delivery, with service, repair or replacement handled in India.

Better over time

Signed software updates install over the air from the ground unit. No return, no re-flash.

Paid your way

UPI, card or netbanking. Your GST invoice comes by email, then tracking when it ships.

Easy returns

Seven days for a damaged, faulty or wrong item, or an unopened unit.

Buy now at wargrobotics.com

Use the link within the channel and power limits of your country; in India, 5725–5875 MHz.
