

Real world, unreal experiences.

A digital video link that records while it streams,
and arrives ready to fly.

Five reasons to change your video link

Premium video transmission

Digital from the sensor to the screen, with no analogue stage anywhere in the path. Measured end to end on the bench rather than summed from datasheets.

60 ms glass to glass · up to 5 km

Ready to go

Bind it, power it, fly. No soldering, no firmware rabbit hole, nothing to subscribe to.

In the box: air unit, ground unit, app

Any screen with HDMI

The ground unit drives whatever screen is already in front of you. A TV, a monitor, a tablet, or goggles you already own.

HDMI out · no goggle to buy

Record while you fly

The recording is not the transmitted stream. It is written on the aircraft at full rate, before anything is compressed for the link.

Onboard storage · pulled off over USB

Fits what you already fly

Standard mounting for the airframes and rovers you own, with the camera on a ribbon so the lens goes where the body cannot.

Quads, fixed wing, VTOL and rovers

Meet our three Wargs

Ghost JON		₹24,999 ₹19,999 +GST
Recording and live	720p · 90 fps	
Sensor	1/4 inch CMOS	
Storage	8 GB ~50 MIN
