WARG ROBOTICS

Real world, unreal experiences.

A digital video link that records while it streams, sets up from your phone, and arrives ready to fly.

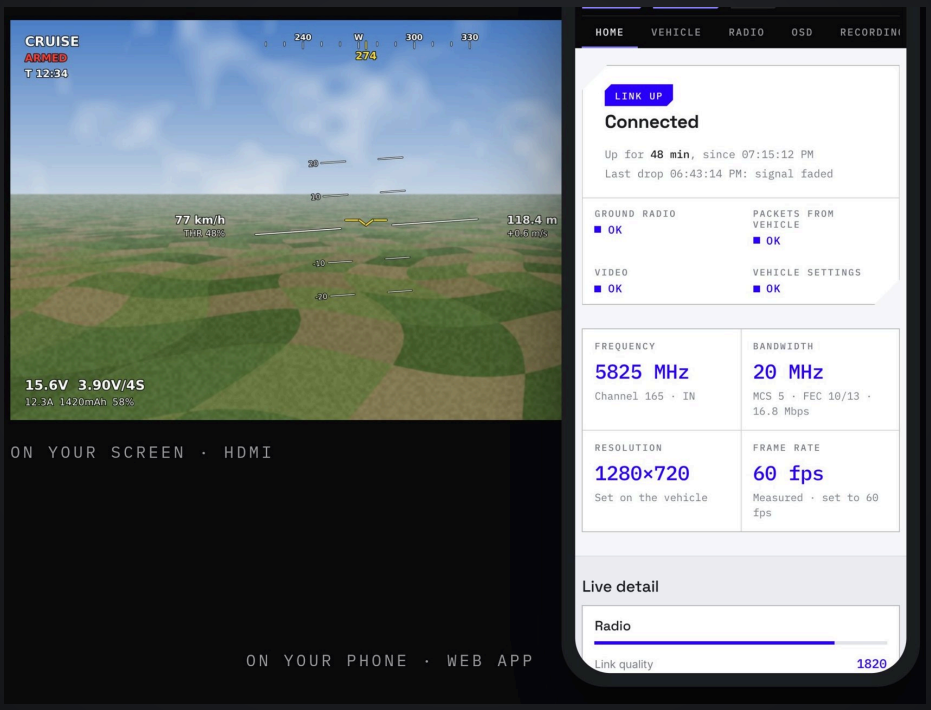

GHOST AND GREYWIND · AVAILABLE NOW AT WARGROBOTICS.COM

GLASS TO GLASS	RANGE	LIVE VIDEO	OUTPUT
60 ms	5 km	720p60	HDMI

GROUND STATION WEB APP

Your whole FPV link, in your phone's browser.

Join the ground unit's Wi-Fi, open one page, and see, set and record everything. No app to install, no laptop, no cables.

01 · WATCH

Link health, video and flight data, live.

02 · TUNE

Camera, radio, OSD and telemetry, from one page.

03 · KEEP

Record on the drone, download to your phone.

GET STARTED

Connect in three steps

1. **Power both units.** The screen shows the Wi-Fi name, password and two QR codes.
2. **Scan code 1** to join the ground unit's Wi-Fi.
3. **Scan code 2**, or open 10.71.0.1. You're in.

FITS WHAT YOU ALREADY FLY

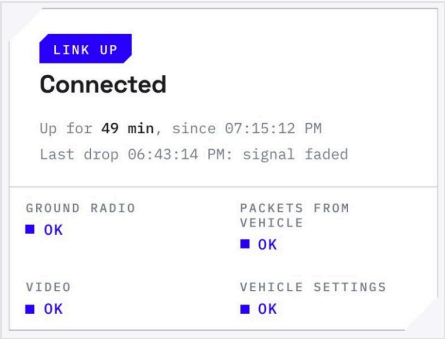

Small enough for a 2 inch freestyle build, unchanged on anything larger. Quads, fixed wing, VTOL, rovers and fixed rigs take the same unit.

The camera sits on a ribbon, so the lens goes where the body cannot. Upgrade what you already own, or design it into a new build.

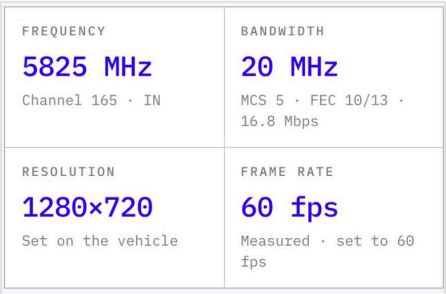

WEB APP · HOME

Is everything OK? One look tells you.

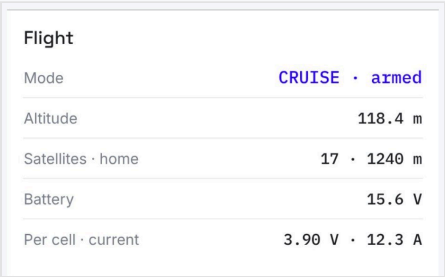

The first page you see answers the only question that matters before take-off.

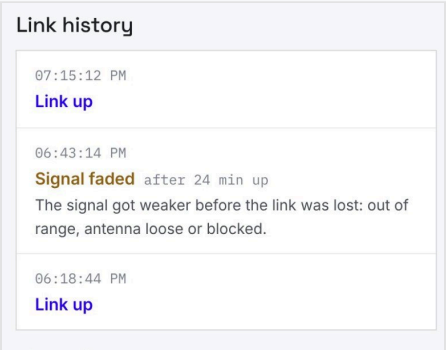

Link status. Four checks, from the ground radio to the video. If one fails, it says why.

Now. Frequency, bandwidth, resolution, and the frame rate actually received.

Flight data. Mode, altitude, GPS, distance home and battery, from your flight controller.

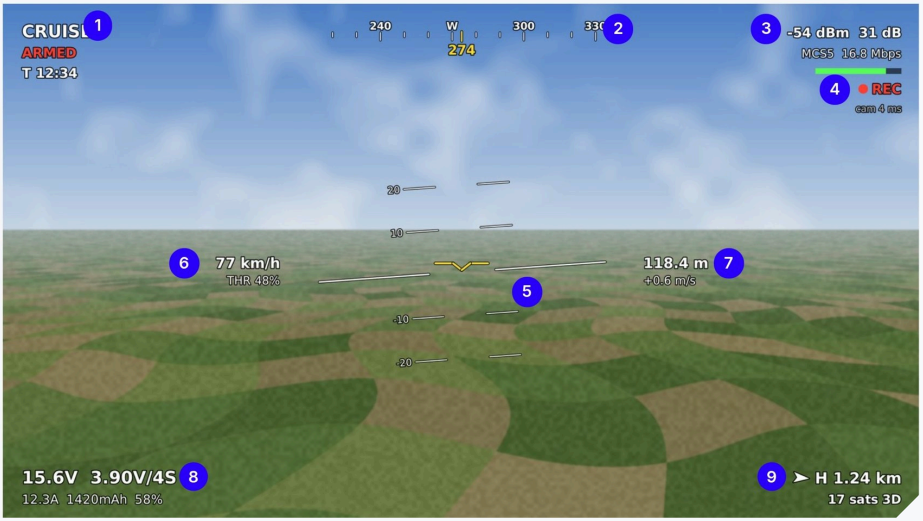

Link history. Every drop, with its likely cause: weak signal, power loss, wrong pairing.

ON-SCREEN DISPLAY

Everything you need, over the video

Flight data from your flight controller and link data from the radio, drawn on the live picture.

1 **Mode, armed, timer.** Flight mode and time in the air.

2 **Compass.** Heading tape and degrees.

3 **Link.** Signal, noise margin, bitrate and a quality bar.

4 **Recording, latency.** REC while recording; camera delay in ms.

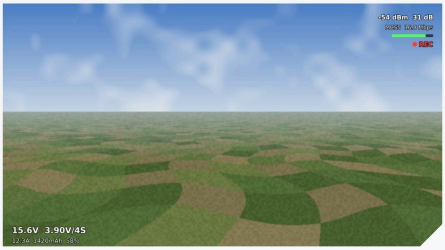

5 **Horizon.** Artificial horizon with pitch ladder.

6 **Speed, throttle.** Speed and throttle %.

7 **Altitude.** Height and climb rate.

8 **Battery.** Voltage, per cell, current, mAh used, %.

9 **Home, GPS.** Arrow and distance home; satellites and fix.

Show only what you need. Here: battery, link and REC.

☑ mode	☑ battery
☑ link	☑ gps
☑ home	☑ altitude
☑ speed	☑ horizon
☑ compass	☑ timer
☑ messages	☑ rec
☑ throttle	☑ latency

OSD tab. Tick any of 14 items. Metric or imperial units, and your own battery warning levels.

ALERTS

Warned in time

Battery and link. Yellow is a warning, red is critical. Flight controller messages show too.

Radio heat. A hot radio lowers its own power to keep the link alive, and tells you.

Status. Video lost, update progress and Wi-Fi details, right on screen.

ANY SCREEN WITH HDMI

No goggle to buy

The ground unit plugs straight into a TV, a monitor or HDMI goggles you already own, with the OSD on the picture.

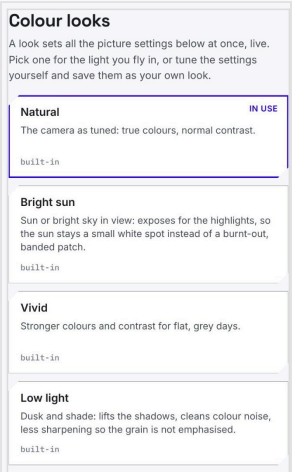

Telemetry too: two-way MAVLink over the same link as the video, for ArduPilot, PX4 and INAV. QGroundControl or Mission Planner on the ground unit's Wi-Fi connects by itself.

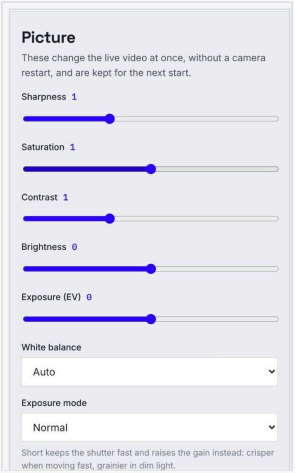

WEB APP · VEHICLE

Make the picture yours

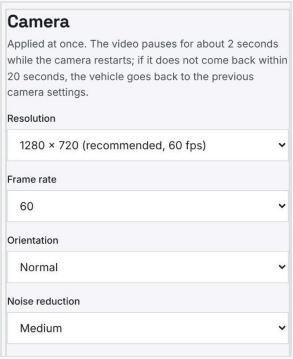

Changes show on the live video at once. No laptop, no cables.

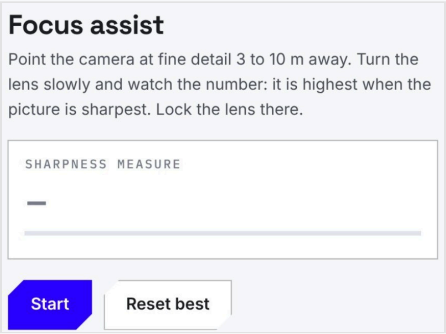

Colour looks. Natural, Bright sun, Vivid or Low light in one tap. Save your own.

Picture. Sharpness, colour, contrast, brightness, exposure and white balance, live.

Camera. Resolution up to 1920 × 1080, frame rate, flip and noise reduction.

Focus assist. Turn the lens and watch the number. Highest is sharpest.

Flight controller port

Pick the port and speed. The vehicle sets itself up.

Saved looks

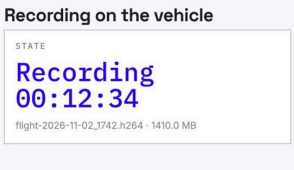

Tune a look for the light you fly in, save it, and switch to it in one tap next time.

Safe to experiment. If a camera change fails, the vehicle goes back to the last working settings by itself.

WEB APP · RECORDING

Record on the drone. Download to your phone.

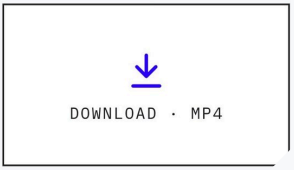

Saved as MP4 on the vehicle, in the same quality as your live view.

1 · Start. Name it if you like and press Start. The timer and size count up.

2 · Fly. REC on your screen shows it is recording.

3 · Download. After landing, tap Download. Files copy over Wi-Fi.

All your flights in one list

Date, size and free space on the vehicle.

Video keeps flowing

Downloads use Wi-Fi, never the video link.

Pick up where it stopped

An interrupted download resumes from your browser.

Never fills up

Recording stops cleanly before the storage runs out.

WEB APP · RADIO AND PAIRING

One page sets both ends of the link

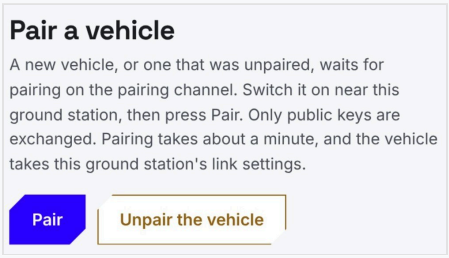

Change a setting once. The ground unit and the vehicle switch together.

Channel and bandwidth

Pick a 5.8 GHz channel and your region. If the vehicle doesn't answer on the new channel within 35 s, both units go back by themselves.

Power and bitrate

Set transmit power for each unit and see what the radio really uses. Optionally cap the video bitrate.

Pairing. Press Pair near the vehicle. About a minute later the two are locked to each other.

Live radio. Link quality, signal, noise margin and antennas in use.

WEB APP · SYSTEM

Looks after itself

Updates for both units

Automatic or one tap. Only signed Warg releases install, never while armed, and a unit that doesn't come back healthy returns to its previous version.

Its own Wi-Fi

On 2.4 GHz, clear of the 5.8 GHz video. The vehicle joins it by itself for downloads and updates.

Page password

Add one so only you can change settings.

Quick fixes

Restart the video or the link, or reboot either unit, with one button.

Meet our three Wargs

Ghost JON

AVAILABLE NOW

₹29,999 +GST
₹35,399 incl. GST

Live and recording	720p · 60 fps
Sensor	8 MP Sony IMX219
Storage	8 GB ~50 MIN AT FULL BITRATE

Greywind ROBB

AVAILABLE NOW

₹35,999 +GST
₹42,479 incl. GST

Live and recording	1080p · 30 fps 720P AT 60 FPS
Sensor	8 MP Sony IMX219
Storage	16 GB ~1 H 45 AT FULL BITRATE

Raven BRAN

LAUNCHING SOON

Price to confirm

Recording	4K · 30 fps PROVISIONAL
Storage	32 GB PROVISIONAL

Ghost + Greywind together: ₹49,999 +GST (₹58,999 incl. GST), for every pair in the order.

Every unit comes with the ground station web app. Prices in Indian rupees; GST at 18% is added at checkout. Delivery within India is included. Raven is priced on release.

Detailed specs

VIDEO

Live video	1280 × 720 at 60 fps, H.264
Other modes	Up to 1920 × 1080, selectable
Bitrate	1.5–19 Mbit/s, adaptive
Sensor	8 MP Sony IMX219
Field of view	140 deg diagonal

LINK

Latency, glass to glass	60 ms
Operating range	Up to 5 km
Band	5.8 GHz (5725–5875 MHz), 7 channels
Antennas	2 per unit, MIMO with diversity
Security	Paired units, 256-bit encryption

RECORDING

Records while streaming	Yes, at live quality
Format · transfer	MP4 · over Wi-Fi

FITTING AND OUTPUT

Display out	HDMI, with on-screen display
Telemetry	MAVLink: ArduPilot, PX4, INAV
Air unit	6 × 5 × 3 cm · 50 g with camera
Power	5 V, both units
Setup · updates	Web app in your phone's browser · over the air
Subscription	None

After you buy

GHOST, READY TO MOUNT

12 months of warranty

From delivery, with service, repair or replacement handled in India.

Better over time

Signed software updates install over the air from the web app. No return, no re-flash.

Paid your way

UPI, card or netbanking. Your GST invoice comes by email, then tracking when it ships.

Easy returns

Seven days for a damaged, faulty or wrong item, or an unopened unit.

Buy now at wargrobotics.com

Use the link within the channel and power limits of your country; in India, 5725–5875 MHz.
